ECOBIOBALL is the first ever **ecological and biodegradable golf ball** to contain fish food in its core, making it perfect for playing golf close to marine environments.

Is a **unique and single-use product** which opens up the possibility of practising golf on:

- Cruise ships
- Seafront Hotels & Resorts
- Beaches
- Jetties and oil rigs
- Boats and yachts
- Reservoirs, lakes, rivers and other marine environments

Due to its innovative formulation, ECOBIOBALL it starts to biodegrade immediately on being submerged in water, and between 36 and 48 hours, the internal core comprised of **100% natural fish food**, is released into the water, where it can be eaten by fish.

ECOBIOBALL is the only and unique way to enjoy real golf in these marine environments:

- playing in the fresh air not cooped up in a practice room or nets cage
- practising the full swing
- view and analyzing the true full trajectory of the ball

### ECO-CERTIFICATIONS

ECOBIOBALL is a 100% safe and non polluting product, and it is certificated for the international testing company Applus+

- Biodegradable according to the OCDE 301D method
- Non toxic for fish according to the OCDE 203 method
- Non toxic for Daphnia magna (planktonic crustacean) according to the OCDE 202 method
